

at the edge of european research

jointly defining the future of learning technology across borders

The Prolearn Network of Excellence (funded by the European Commission from 2004 to 2007), always has been a home base for European research and development projects. EATEL continues this work to offer a platform for organising joint funding proposals.

EATEL aims at continuously innovating and consolidating the field of technology-enhanced learning research to advance the state of the field. By interconnecting researchers and research groups, EATEL paves the way for organising new funding proposals, research exchanges, and targeted events.

To keep track of latest developments, EATEL organises a preprint and publication database. Get the latest news at the source! Check your own performance and advertise your latest work to increase your and your institution's reputation! Get organised in EATEL to balance your efforts with others in the field! Share the latest call for papers, book chapters, journal articles, and events! Fight isolation, stop bowling alone!

„Join to get connected!”

Wolfgang Nejdil
(L3S, Germany, Vice-President)

learning technology is business

corporate participation and cooperation

EATEL connects professionals in technology enhanced learning in research and industry. As an overarching independent body, EATEL facilitates continuous and rapid transfer of research results into deployment and helps to initiate collaborative partnerships.

EATEL mediates between competitors and engages in development, conversion, and adoption of standards.

EATEL provides infrastructure and testbeds, offers access to experimental technology, and serves as a technology observatory to spot emerging trends, to facilitate the development of core, as well as niche markets, and to identify competence gaps – to the benefit of society across corporate boundaries.

Do you want to have easy access to some of the best researchers and developers in European TEL? Get career support through networking? Want to showcase tools and technologies? Participate in defining grand challenges one company alone cannot meet?

**„EATEL embodies our vision
of the future of TEL:
Innovation, Creativity,
and Passion.”**

Peter Scott
(Open University, UK, President)

lifelong competence acquisition sharing & creating professional excellence

EATEL promotes knowledge, education, and continuing education in the area of technology enhanced learning.

EATEL organises and supports regular educational and scientific events such as the annual European Conference on Technology-Enhanced Learning (EC-TEL), a summer school for postgraduate students, or the annual professional training facts (PTF).

EATEL facilitates travel grants and offers reduced conference fees to its members. Furthermore, EATEL supports European study programmes related to the topic of technology enhanced professional learning.

An electronic community portal and information exchange services allow you to instantly connect to a transnational community! EATEL supports the provision of learning material and learning tools.

Increase your audience! Master professional content! Participate!

„EATEL is for the people
in TEL: connecting academia
and industry.”

Ralf Klamma (RWTH Aachen,
Germany, Member)
